SUMMARY

DevOps and platform engineer with five years on AWS, Kubernetes, Terraform and CI/CD. At Agero I run the platform under four products: a Ruby on Rails dispatch app on multi-region ECS Fargate, an AI agent platform on EKS, a simulation product and an ML platform. I build the deploy system, the test environments and the infrastructure behind them. Since June 2026 I work with an AI coding agent under strict guardrails, and I open about three times as many pull requests a month as before.

SKILLS

AWS	*ECS Fargate, EKS, AWS Batch, Lambda, Step Functions, Aurora (Serverless v2, fast clones), RDS, OpenSearch, ElastiCache, S3, SageMaker, Organizations, Identity Center, Secrets Manager, KMS*
Infrastructure as code	*Terraform, Terraform Cloud (private registry, dynamic credentials), terraform test, CloudFormation, Ansible*
CI/CD	*CircleCI (custom orbs), GitHub Actions, OIDC keyless deploys, per-PR ephemeral environments, blue/green and canary deploys, Jenkins*
Containers	*Docker, Kubernetes (EKS), Helm, External Secrets, AWS Load Balancer Controller*
Observability	*Datadog, Fluent Bit, CloudWatch, Splunk, PagerDuty, Rollbar*
Security	*Least-privilege IAM (CloudTrail, Access Advisor), Wiz, Trivy, Snyk, HashiCorp Vault, Okta, WAF*
Data	*PostgreSQL, PostGIS, pgbouncer, Redis, OpenSearch, Snowflake, Fivetran, DynamoDB, MySQL, MongoDB*
Networking	*VPC, Transit Gateway, ALB, NLB, Route 53, Cloudflare, Fastly, ACM*
Languages	*Python, Bash, Go, Ruby (Rails), SQL, TypeScript, HCL*
AI	*OpenCode, Claude, MCP, GitHub Copilot, Bedrock, SageMaker, HuggingFace*

EXPERIENCE

AGERO **Medford, MA (Remote)**

Senior DevOps Platform Engineer **Oct 2024 - Present**

- Built a production platform for a new simulation product from scratch: a monorepo, 15 Terraform modules in a private registry with their own tests and scanning, a new VPC, ECS, AWS Batch, Aurora and CircleCI deploys. Later scaled Batch from 100 to 1,000 parallel jobs.
- Moved the ML platform into its own AWS account, about 66 Terraform resources with OIDC dynamic credentials, and cut production inference over with zero errors and zero throttling in the first 24 hours.
- Moved every deploy off HarnessCD onto a CircleCI orb and pipelines I built, cutting deploy times by 40% and lifting uptime by 25%. A later major version deploys three products across separate AWS accounts, and emergency pipelines are designed to deploy production in about 5 minutes instead of 30.
- Built per-PR ephemeral environments (30 to 40 alive at a time), then replaced their masked staging data with a seeded golden database and a pool of copy-on-write clones. All 28 acceptance scenarios pass on it, and deploys went from 14.9 minutes to 8 to 11.
- Designed just-in-time production database access. After approval, a time-boxed, IAM-authenticated and audited login exists in about 9 seconds and is revoked on expiry. 65 automated tests, approved by Security.
- Rebuilt the AI agent platform's staging and dev accounts on EKS with no interruption, and took the downtime out of its deploys with readiness gates, preStop hooks and graceful drain.
- Made the weekly refresh of about ten QA databases reliable with fast clones, retries and autoscaling-aware scale-down. Downtime per environment fell to 31 to 46 minutes.
- Cut CI/CD and runtime IAM roles to least privilege using CloudTrail and Access Advisor data, resolved 100+ Wiz findings, hardened Docker images (85% fewer critical vulnerabilities), and led the response to a public CA compromise across 11 repositories.

- Implemented Datadog monitoring and alerting that cut mean time to detection by 50%, and shift-left QA automation that kept the platform at 99.997% availability.
- Upgraded production OpenSearch from r6g to r8g and GP2 to GP3 with zero downtime: 30% faster and 10% cheaper. Run the disaster recovery exercises and share the on-call rotation.
- Since June 2026 I work with an AI coding agent under strict guardrails: read-only by default, only commands I reviewed, no production access. About 58 pull requests a month, up from 18.

BLUE APRON **New York, NY (Remote)**
DevOps/SRE Engineer **Oct 2022 - Oct 2024**

- Ran and upgraded Kubernetes (EKS) clusters across environments. Shared Helm charts improved deploy efficiency by 30%.
- Managed cross-account AWS infrastructure in Terraform and cut costs by 20%.
- Designed Jenkins CI/CD pipelines that made deploys 40% faster, and triaged pipeline failures for developers, cutting blocked time by 15%.
- Built "Herb" preview environments inside the staging cluster, a self-serve Terraform pipeline for the Fastly CDN, and a Go CLI for AWS login, Kubernetes and secrets.
- Moved ElastiCache Redis to a different AWS account inside a 1-hour downtime window, with scripted snapshots and a Route 53 cutover.
- Monitored apps with Datadog, Rollbar and Snyk, reducing security risk by 25%, and covered a 24/7 on-call rotation that held 99.9% uptime.

ALAMO CONSULTING **Madrid, Spain (Hybrid)**
DevOps Consultant Intern **Sept 2021 - Aug 2022**

- Set up Jenkins pipelines for several client projects, improving deploy efficiency by 25%.
- Tuned client AWS infrastructure for a 15% cost reduction, and split monolithic apps into Docker-based microservices.

MADRID POLYTECHNIC UNIVERSITY **Madrid, Spain**
Python Backend Developer **Feb 2022 - July 2022**

- Wrote a Python wrapper around a REST API for a health research app (medal.ctb.upm.es), working with professors and PhD students.

PERSONAL PROJECTS

Astra DevOps (2025 - present). An internal developer platform for startups on AWS. Infrastructure runs in the customer's own account and Astra is the control plane for IaC, deploys, observability and security baselines.

Squadra (2026). Production web app for a private World Cup prediction league. Next.js, Supabase Auth, Postgres row-level security and realtime updates, on Vercel.

CERTIFICATIONS

Certified Kubernetes Administrator (CKA), The Linux Foundation, Feb 2024, valid until Feb 2027. Credly

HashiCorp Certified: Terraform Associate (003), HashiCorp, Sept 2025, valid until Sept 2027. Credly

AWS Certified Solutions Architect (Associate), Amazon Web Services, June 2023, expired June 2026.

EDUCATION

POLYTECHNIC UNIVERSITY OF MADRID **Madrid, Spain**
B.S. Software Engineering, GPA 3.5 **2018 - 2022**
